

# **PERSONALIZED HEALTH AND WELLNESS ASSISTANT**

## **WORK BREAKDOWN STRUCTURE**

**Course Title** – Software Engineering

**Slot** – G2 + TG2

**Name** – Vansh Kumar Payala

**Registration No.** – 22BAI1386

## ***Introduction –***

The ‘Personalized Health and Wellness Assistant’ will serve as a new generation mobile application that will include artificial intelligence and machine learning components to suggest a recommended health and wellness plan based on data inputted by the user. This is a new concept which will include a chatbot and will assist the users with medication and prescription guidance; therefore, the usage of the app will be enhanced while appropriate health support will be provided. The most important one is to educate and give specific recommendations concerning the state of one’s health and help to make the right decision.

To accomplish the mentioned above proposed objective of a well-structured and efficient manner of development, Software Development Life Cycle, namely the Incremental Model has been chosen. This way the application is develop in phases including this feedback of users and can be improved gradually by incorporating more features. Thus, when realizing the project in stages, it is also possible to ensure that each of the elements is functional and the final outcome is a usable application that will meet the needs of end-users. It also shows the concrete description of Incremental Model in the framework of the ‘Personalized Health and Wellness Assistant’, as well as naming all the activities of each phase and their outcomes.

## ***Steps to Construct the WBS –***

### ***Step 1: Identify Major Deliverables and Components –***

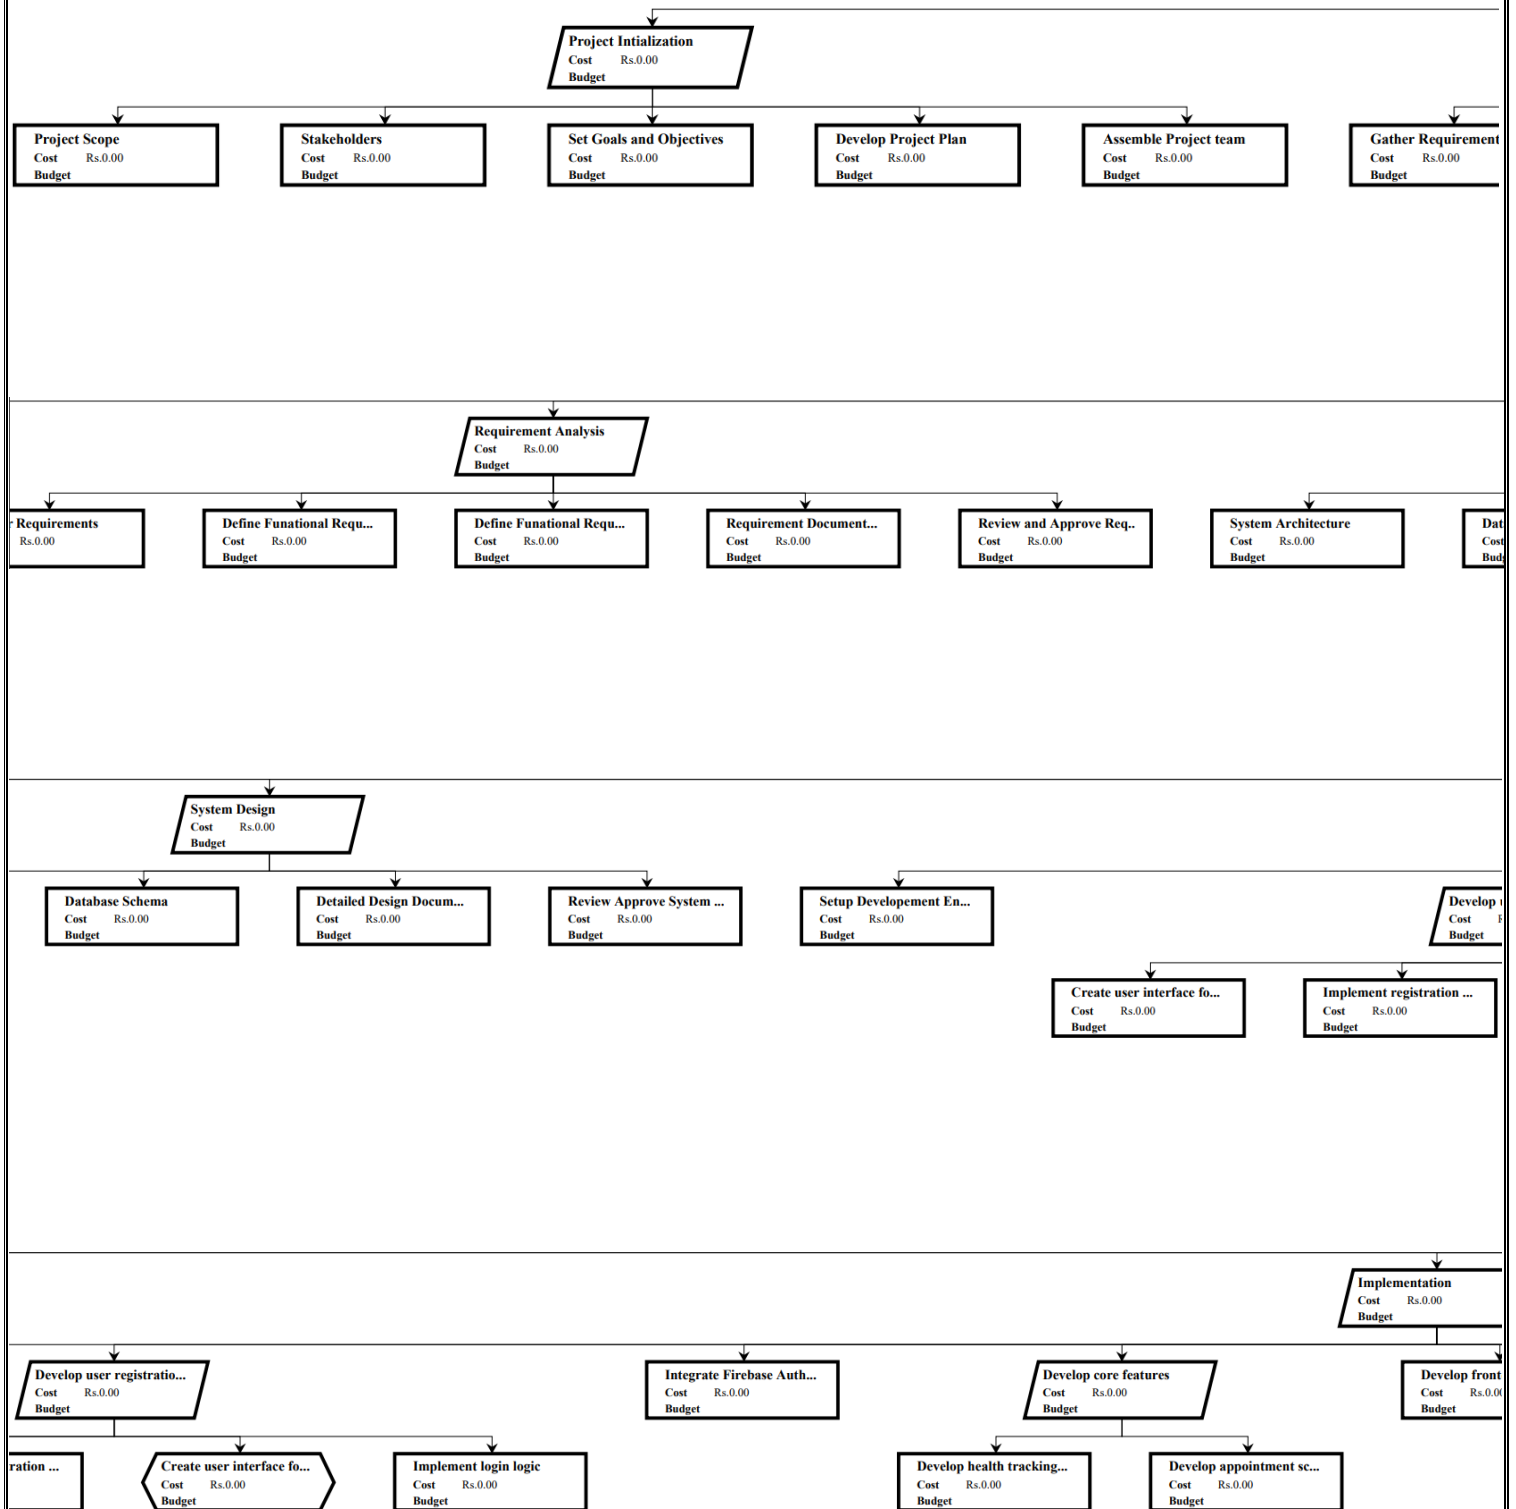

- Project Initialization
- Requirement Analysis
- System Design
- Backend Development
- Frontend Development
- ML Model Development
- Chatbot Development
- Integration of ML Model
- Integration of Chatbot
- Testing
- Deployment
- Maintenance

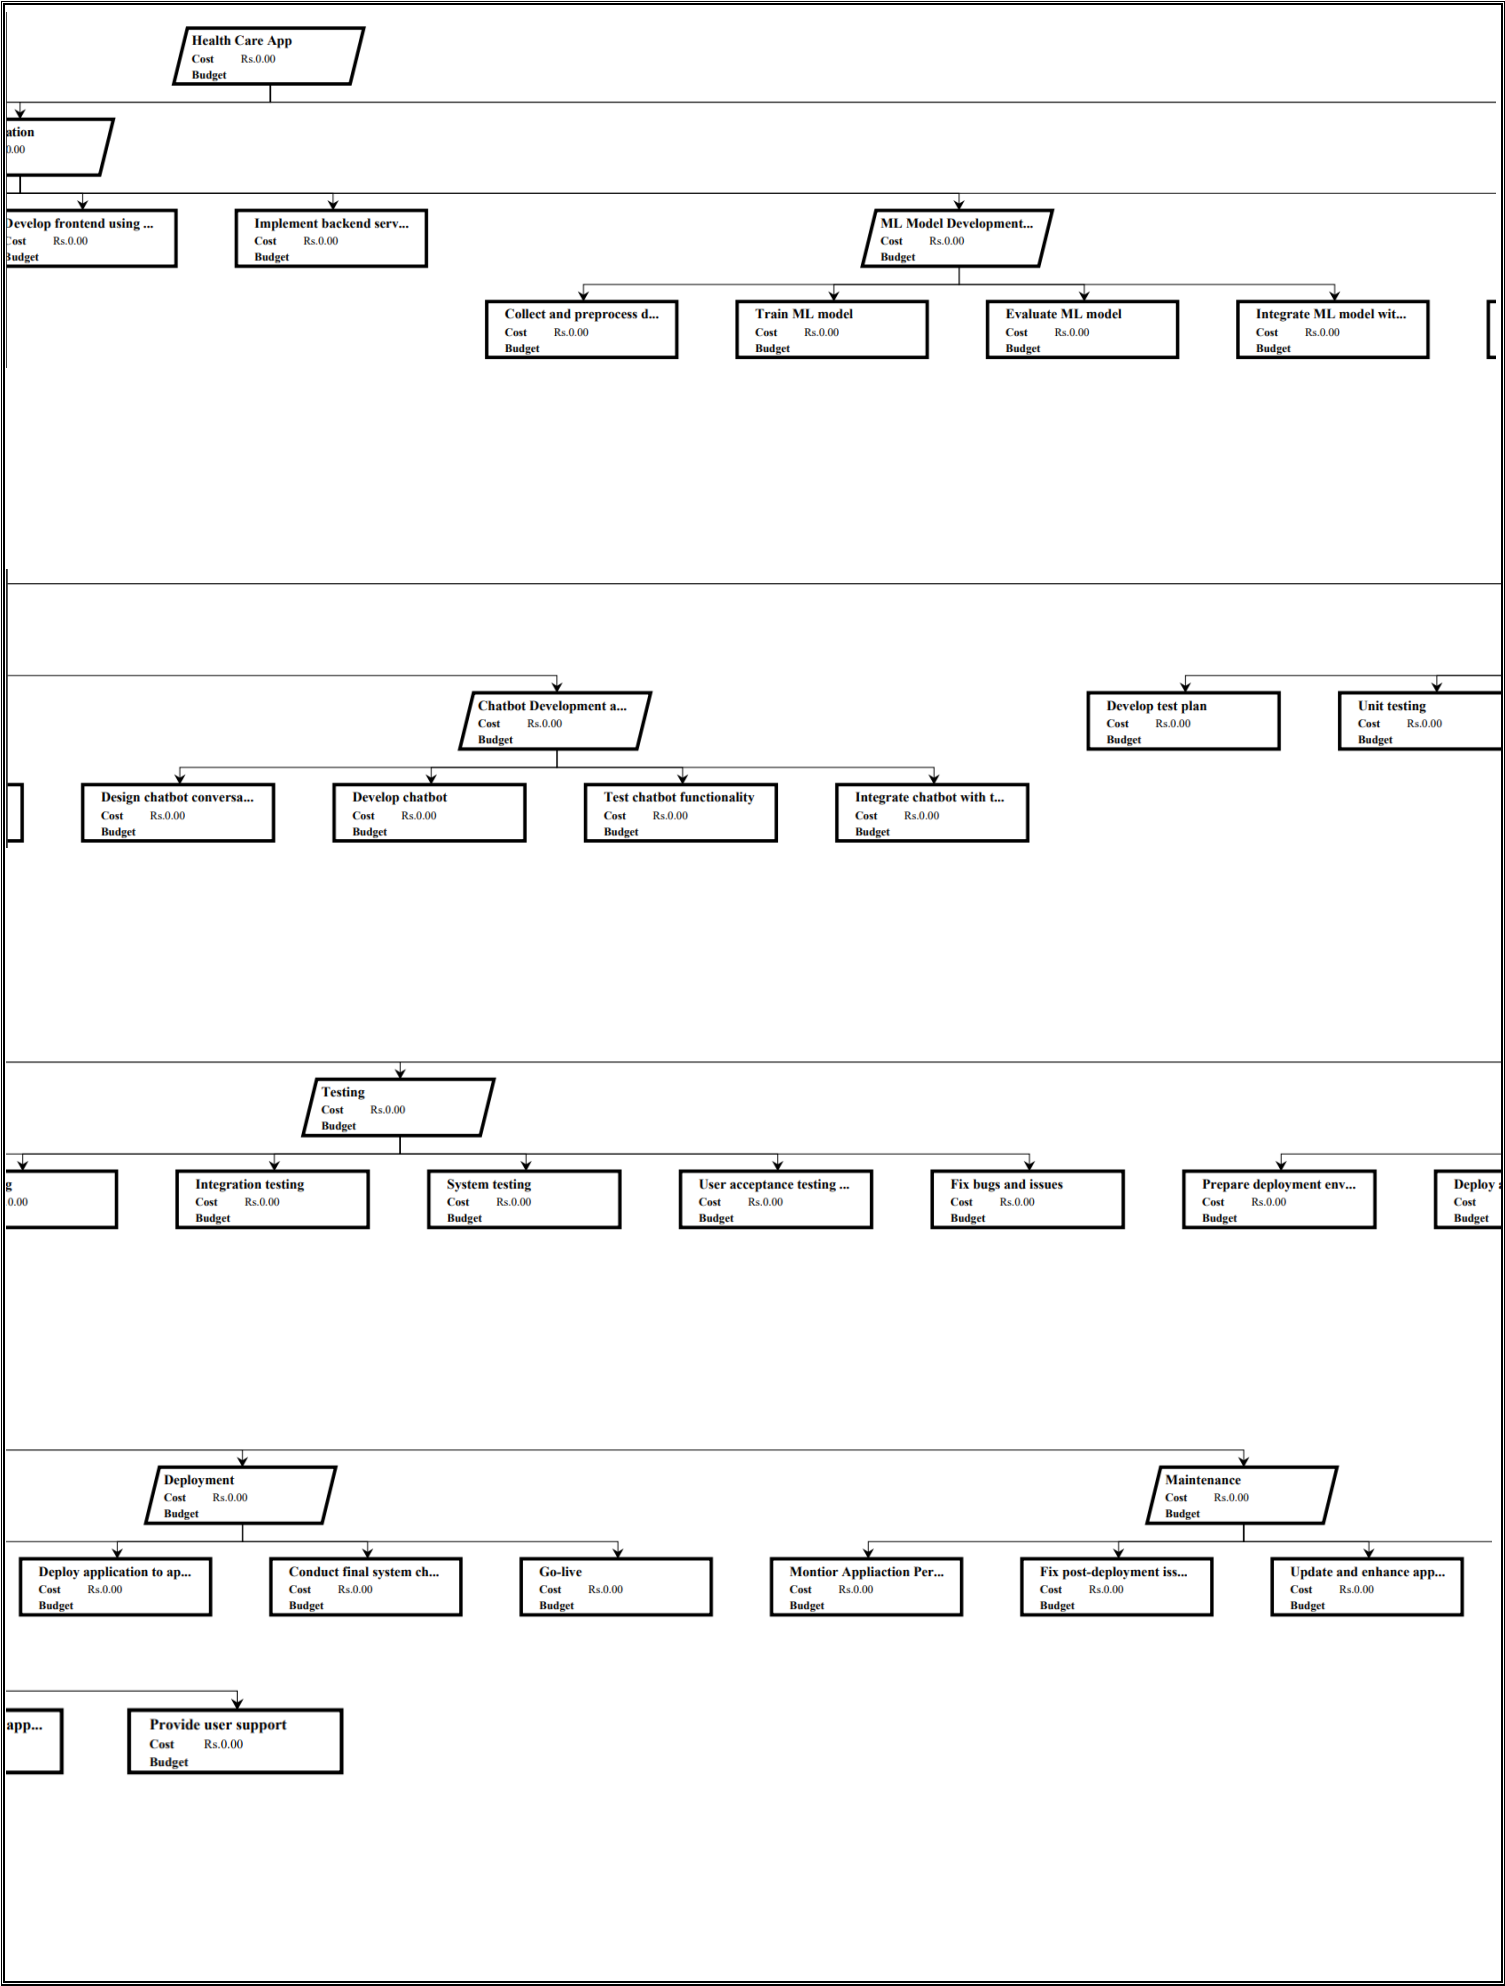

Step 2: Break Down Major Deliverables into Subtasks –

- Project Initialization
  - Project setup
  - Version control setup
- Requirement Analysis
  - Gather requirements
  - Analyze requirements
- System Design
  - Design architecture
  - Design database schema
- Backend Development
  - Set up backend environment
  - Develop API endpoints
  - Implement database
- Frontend Development
  - Set up frontend environment
  - Develop UI components
  - Connect frontend to backend
- ML Model Development
  - Data collection
  - Data preprocessing
  - Model training
  - Model evaluation
- Chatbot Development
  - Design chatbot conversation flow
  - Develop chatbot logic
  - Train chatbot

- Integration of ML Model
  - Integrate ML model with backend
  - Test ML model integration
- Integration of Chatbot
  - Integrate chatbot with app
  - Test chatbot integration
- Testing
  - Unit testing
  - Integration testing
  - User acceptance testing
- Deployment
  - Prepare deployment environment
  - Deploy application
- Maintenance
  - Monitor application
  - Perform updates and fixes

## Final WBS –

## Resource Page –

	🌸	Name	RBS	Type	E-mail Address	Material Label	Initials
1	🌸	ProjectLibre		Material			P
2	🌸	Version Control System (Git)		Material			V
